

## React-Redux

redux is a library which allows to store the data at central storage

to use this library we need to install redux and react-redux

redux uses following component.

1. store---It store the state
2. reducers--- these are functions which manages the state, these functions receives oldstate and action object and it converts old state into new state
3. action---It is a object which has 2 property, type, payload

### Reservation list

id	name	amount
2	Revati	5000

### cancellation

id	name	amount
1	Rajan	2000

Amount----5000+3000+5000-2000

book ticket (id:1, name:Rajan amt: 3000)

book ticket (id:2, name:Reavti amt: 5000)

cancel ticket (id:1, name: rajan amt :2000)
